

WHAT IS CLAIMED IS

1. A wrist watch comprising a glass rim for fixation of a glass; a barrel, which contacts with an underside of the glass rim to contain therein a movement; a first packing provided between the glass rim and the barrel to ensure water-proofness between the glass rim and the barrel; and screws disposed inside of the packing to fix the barrel and the glass rim together.

2. A wrist watch according to claim 1, wherein the screws have a second packing on an external shape thereof.

3. A wrist watch according to claim 1, wherein the barrel has screw holes, into which the screws are inserted, and the screw holes and the second packings engage with each other.

4. A wrist watch according to claim 2, wherein the barrel has screw holes, into which the screws are inserted, and the screw holes and the second packings engage with each other.

5. A wrist watch according to claim 1, wherein the glass rim comprises a dial-plate bearing surface, which bears a dial-plate, a female thread portion adapted to engage with the screws, a packing box, which bears the first packing, and a bearing surface, which bears the barrel.

6. A wrist watch according to claim 2, wherein the glass rim comprises a dial-plate bearing surface, which bears a dial-plate, a female thread portion adapted to engage with the screws, a packing box, which bears the first packing, and a bearing surface, which bears the barrel.

and a bearing surface, which bears the barrel.

7. A wrist watch according to claim 3, wherein the glass rim comprises a dial-plate bearing surface, which bears a dial-plate, a female thread portion adapted to engage with the screws, a packing box, which bears the first packing, and a bearing surface, which bears the barrel.
